

I N D E X

TO

VOL. V.

	Page.		Page.
A BORIGINES, American,		ed to the scientific world to	
weapons of	215	be adopted instead of <i>caloric</i>	335
Abcess, lumbar, case of	277	Anus imperforated	45
Acid, fœcal, &c. noticed by Prin-		Arrowsmith's map of arctic	
gle	87	America	462
Acid, nitric, an uncertain re-		Arsenic, symptoms excited by	
medy in syphilis	11	taking it into the stomach	43
Acid, nitric, directions for using	13	Association, stomach considered	
Acid, nitric, when highly con-		as a centre of	300
centrated, acts not upon fil-		Associations, wrong, examples	
ver, copper and tin	91	of in chemical and medical	
Acid, oxalic, in scrophulous tu-		reasoning	113
mours	95	Atmosphere, effects of lessening	
Acid, purulent or septic, exhal-		its pressure on the human	
ing from nasty ulcers, infects		body	473
the atmosphere	87	Baker, Mr. Gardiner, respectful	
Acid, septic, formed in putre- fying flesh	472	mention of	57
Acidity in the stomach and in-		Barker, Dr. Jeremiah, his account	
testines	88, 145	of diseases in Cumberland	
Air, atmospheric, wonderful ef-		county (Maine)	144
fects of breathing it	461	Barker, Dr. Jeremiah, his account	
Air-bath, what	194	of bilious colics	267
Alimentary canal, diseases of,		Barnwell, Dr. William, his phy-	
cured by alkalies	413	sical investigations	238, 423
Alkaline remedies, experience		Barnum, Mr. Samuel, describes	
with 150, 220, 221, 267,	477	a case of extra-uterine fœtus	40
Alkalization of water the great		Barnum, Mr. Samuel, relates a	
means of rendering it deter-		case of poisoning by arsenic	43
gent and anti-pestilential	195	Bayley, Mr. Richard, his happy	
Alkalization of ships the capital		employment of alkalies in	
expedient to render them		the marine hospital near New-	
sweet and healthy	455	York	71
American philosophical society,		Bear, American, curious facts	
transactions of, vol. iv.	67	concerning the generation of	343
American philosophical society,		Bile falsely considered the excit-	
officers of	352	ing cause of fevers	117
Anderfon, Mr. Samuel, describes		Bile, the office of, to neutralize	
the yellow fever in the U. S.		the peccant acidity of the	
ship Delaware	280	primæ viæ	ibid
<i>Anticrouon</i> , the repeller, propof-		Bitter, a new, pleasant and	
		strong one	159

	Page.		Page.
Black, experiments to prove it is not privation of colour	205	Census, second, of the United States	216
Black-vomit, observations on	129	Chancres, venereal, cured by alkalies	152
Black-vomit in the Cadiz distemper	105	Character of American physicians vindicated	180
Black-vomit in a Scotch emigrant	226	Charcoal of copper resembles diamond	267
Blair, Mr. William, his strictures on his experiments upon pus	85	Chisholm, Dr. intelligence from	229
Blindness, singular instance of	92	Chisholm's letter to Dr. Davidson	231
Boa constrictor, or fachen-snake	208	Chisholm's opinions on the fevers of Grenada and Demarara	232
Barton, professor B. S. essay on poisonous honey	47	Cleanliness, complete theory of	191
Barton's collections for a materia medica	436	Cleanliness, mode of accomplishing	197
Body, human, spontaneous combustion of	460	Colic, <i>rebellious</i> , cured by foot	273
Bones of an extra-uterine fœtus discharged by stool	42	Colic, bilious, cured by alkaline remedies	268
Bonetus, his experiments to prove the balsamic and purifying qualities of bile	116	Colours, the prismatic, visible on black bodies in bright sunshine	206
Borrowe, Dr. Samuel, reports a remarkable case of hydrophobia	73	Combustion, spontaneous, singular cases of	458, 460
Bringinghurst, Mr. Joseph, on alkalies in gastric diseases	413	Combustion of smoke	480
Brown, Dr. Samuel, on poisoning by stramonium seeds	36	Contagion, how it differs from infection	186
Brydone, Mr. his account of the calcareous powder of Malta	122	Contagion, its empire curtailed	199
Buel, North and Trowbridge, Drs. discover vaccine virus in American kine	93	Copal-varnish made with ether	90
Cadiz, account of yellow fever there in 1800	103	Consumption, pulmonary, cured by salivation	6, 394, 476
Caldwell, Dr. Charles, medical and physical memoirs 62, 200,	327	Consumption, pulmonary, cured by fox-glove	13
Caldwell's reply to Dr. Haygarth's letter to Dr. Percival, &c.	330	Consumption, pulmonary, benefited by alkalies	220, 221
Caldwell's oration before the Philadelphia medical society	447	Consumption, pulmonary, very prevalent in Portsmouth	354
Campbell, Dr. J. P. case of imperforated anus	45	Consumption, pulmonary, new remedy proposed for	479
Cancerous ulcers healed by alkaline dressings	150	Correspondence with the reviewers	358, 371, 372
Cancerous tumours extirpated by caustic ley	ibid	Cotton, cultivation and manufactures of	441
Canvass-back duck described	342	Coxe, Dr. J. R. relates a case of hydrophobia	257
Carendeshez, Mr. experiments on copal	90	Cow-pock exists on the teats of American cows	93
Catlin, Mr. A. describes a negro growing white	83	Cow-pock, its progress in Europe and America	225
		Cow-pock, report on its inoculation in New-York	236
		Cow-pock, narrative of facts on its inoculation	373

INDEX.

	Page.		Page.
Cow-pock, observations on	381	produced in many parts of the United States	199
Cruikshank, Mr. defence of the new chemistry assailed by Priestley	390, 393	Dogs, ordinance of New-York concerning	73
Cutbush, Dr. Edward, relates a case of lumbar abscess	277	Domingo, St. natural history of that island promised	339
Daniel, Dr. J. M. his practical remarks on the internal use of carbonate of pot-ash	419	Domingo, St. platina and gold abound there	340
Dancer, Dr. Thomas, his medical assistant	432	Dreams, thoughts on	125
Datura stramonium, seeds poisonous	38	Earth, calcareous, a good application to ulcers	122
Datura stramonium used as a remedy	84	Earth, calcareous, recommended by the French chemists as a destroyer of pestilential taints	475
Debility, nervous, relieved by phosphorus	95	Earthquakes and tempests, connection of, with epidemical distempers	25
Degeneracy of the poor in England	254	Electricity, medical, good effects of	45
De Gorter, his opinion on putrefaction	114	Electron proposed by Mr. Woodward as a substitute for electricity	168
De Rossiet, Dr. A. J. on the medicinal effects of thorn-apple seeds	84	Electron, solar, theory of	173
Devaux, citizen, his eulogium on lime	475	Emetics, alkaline, highly recommended	146
Deveze, Mr. J. on effusions under the skull	67	Emigrants, crowded in ships coming from Europe, engender pestilence	70, 234
Dentifrices, alkaline, good for the teeth	62	Epilepsy, argentum nitratum in	152
Diamonds burned in oxygenous air	267	Excreted matters, their four kinds, which degenerate to infectious poison	192
Diemerbroeck, his testimony in favour of the anti-pestilential qualities of alkalies	118	Facts concerning winds and storms	465
Digitalis purpurea cures phthisis	13	Fern, decoction of, expels the tape-worm	39
Digitalis purpurea, practical remarks on	17	Fœtus, extra-uterine	41
Digitalis purpurea, its effects in the rheumatism	425	Foot, Dr. Malachi, on sneezing in dropsy of the head	132
Dirt, distinction between it and nastiness	186	Forty days, reasons why that period of time was selected for quarantines	244
Dirt-eating, disease of, described	434	Fracture of the skull, how to be treated after effusion	67
Discovery of the anti-pestilential powers of alkalies as important as the invention of the alphabet	195	Gall innocent and harmless	116
Distemper, pestilential, at Cadiz	103	Galvanism, experiments with the pile of Volta	478
Distemper, pestilential, resembles yellow fever	105	Galvanism, experiments and observations on	155, 481
Distemper, pestilential, editorial remarks upon it	110	Gammons, rubbed with pot-ash, their excellent quality	472
Distempers, infectious, locally		Gapper on digitalis	485
		Generation, equivocal, vindicated	28
		Generation, equivocal, disputed	34

	Page.		Page.
Generation of the American bear, peculiarities of	343	Hydrogenous or phlogisticous air, explanation of its production in the thermolamp	474
Georgia, pine-lands of, good for cotton	441	Ireland, emigrants from, engender pestilence on their passage to New-York	69, 234
Georgia, sketch of the settlement	442	Ireland, malignant fever locally produced at Waterford	90
Georgia, rivers and towns of	444	Infection, wherein different from contagion	186
Germination, experiments on	481	Jardine, Dr. L. J. relates a case of epilepsy	152
Giroud, Mr. mineralogical tour through the interior of St. Domingo	341	Jenner, Dr. progress of his own mind in tracing the workings of the vaccine virus	239
Glow-worm, or cicindela	216	Jenner's instructions for vaccine inoculation	483
Goad-fly breeds in the backs of cattle	344	Jews, their exact discipline under the Levitical law, against nastiness	193
Goitre, strictures on professor Barton's memoir	329	Jones, Dr. Gardiner, expels tetania by fern	39
Gonorrhœa virulenta cured by alkaline injections	152	Kalmia, three species of it, affording noxious honey	48
Gout, efficacy of ginger in	480	Kine-pock, see cow-pock	
Greenville (N. C.) topography and diseases of	137	Lazarettos, name and history of	247
Gulf-stream, history of	426	Lazarettos the nurseries and magazines of the plagues they were erected to prevent	ibid
Hall, Rev. James, describes the ancient mounds of earth in the western country	321	Lectures, chemical, anatomical, clinical, &c. at New-York	94
Haygarth, Dr. John, analysis of his letters on American pestilence	197	Leeward, north-east snow-storms begin to	467
Haygarth, Dr. John, examination of his letter on typhus-fevers	185	Lewis, Rev. Zechariah, letter to him on the subterranean wall in North-Carolina	21
Hearing, remarks on the sense of	415	Lewis's reply to professor Woodhouse on the same	397
Heat, means of producing intense	479	Life, duration of, in the United States	217
Honey, poisonous, collected from wild plants by wild bees	47	Light of the sun-beams, refracted on certain surfaces, becomes so dispersed and commixed as to constitute what is termed black	206
House-cleaning, maxims of, applied to ship-cleaning	254	Lime, its demephitizing quality	475
Houses of ordinary christian people in Europe and America, their poisonous nastiness, 185,	249	Lime a good auxiliary to soap and ley in overcoming infection	71
Houses of the Mahometans, condition of	250	Lime-water an agreeable eye-wash	151
Howard, Mr. John, his quarantine at Venice, and nastiness of the lazaretto	247	Litmus turns red in a few hours if exposed to a foul ulcer	87
Hydrocele, singular case of	134	Liver not the organ which se-	
Hydrocephalus cured by sneezing	132		
Hydrophobia, cases of 1, 73, 75, 79,	257		
Hydrophobia, observations on 50,	52, 72, 77, 79,		
Hydrogen, a modernized name for phlogiston	474		

	Page.		Page.
eretes the matter of black-vomit	130	Mitchill makes a motion in congress for a quarantine committee	344
Livingston, Mrs. the biographer of Dr. Shippen	335	Mitchill's theory of cleanliness and ventilation	191, 197
Louisiana and the Mississippi, observations on	489	Mitchill's letter to the secretary of the navy on employing alkaline salts to prevent pestilence in ships	456
Mace, Dr. John, on a malignant distemper in Maryland	345	Mitchill's report to the secretary of the treasury on a proposal to employ the thermolamp for light-houses	463
Madness, extraordinary cases of	408	Mitchill collects the facts concerning the atmospheric currents which accompany American snow-storms	465
Maine, febrile diseases of, in 1800	144	Moore, Mr. Thomas, recommends deep ploughing	316
Mayell, Mr. William, experiments on the decomposition of water	219	Mus cricetus, or hamster, specimen of, forwarded by president Meigs	89
Mease, Dr. James, observations on the canine disease	50, 292	Nastiness, from what sources it comes	192
Mansfield, Mr. J. mathematical essays	453	Natural history, facts and experiments in	205
Measles, genuine and spurious forms of	339	Navy of the United States, rules for preventing noxious vapours there	458
Medical commencement in New-York	478	Negro, another becoming white	83
Miasmata, etymology and definition of	187	Newtonian doctrine of black disputed	206
Milledge, Mr. John, description of the hamster of Georgia	89	New-York, law of its common council concerning dogs in 1801	73
Miller, Dr. remarks on the importance of the stomach	300	New-York, proceedings at the marine hospital of, at Staten-Island, to neutralize infection by alkalies	70
Miller's view of the nature of fever	304	New-York, improvements in the state hospital of	80
Miller's considerations on the prevention and treatment of fevers	305	New-York, experiments there on the acidity of pus	85
Mississippi, remarks on	491	New-York, inspection of pot-ash for the port of	81
Mitchill, Dr. his letter to professor Rush on the perversion and retardation of knowledge	113	New-York, voyages from, to Southern Georgia	82
Mitchill's facts and observations in natural history	203	New-York, skeleton of the mammoth found in the marle-pits of	83
Mitchill makes experiments to detect the constitution of black colour	206	New-York, its soil cherishes the Sicilian wheat	81
Mitchill's additional report to the agricultural society on the mineralogy of New-York	212	New-York, medical school and lectures at	94
Mitchill's doctrine of pestilential fluids respectfully noticed	33, 87, 88, 151, 232, 413, 419		
Mitchill's thoughts on quarantines and lazarettos	243		
Mitchill's explanation of his chart of chemical nomenclature	333		

	Page.		Page.
New-York, additional mineralo- gical report concerning the state of	212	Philadelphia chemical society's premium	349
New-York, population of	218	Philadelphia, topographical de- scription of	63
New-York, account of the pes- tilence in the city of, 1801	222	Philadelphia philosophical so- ciety, Magellanic medal	351
New-York, report of the spread of kine-pock in	236	Philadelphia medical graduates in 1801	82
New-York vaccine institution	346	Philadelphia, address to the col- lege of physicians of	198
New-York agricultural society, officers of	353	Philadelphia, new medical and surgical school at	239
Nitre of the ancients, and, until lately, of the moderns, means soda	119	Philadelphia medical society, premium of	476
Nitre, of late, transferred to mean salt-petre, or septite of pot-ash	120	Phlogiston the material which forms blaze or flame	ibid
Nitre, its abuse in the practice of physic	121	Phlogiston, or hydrogen, curi- ous properties of	474
Nomenclature, chemical, synop- sis and arrangement of	334	Phosphorus, medical uses of	95
North-Carolina medical society	351	Physick, Dr. Philip S. dissection of a body dead of hydrophobia	2
Ocean, Atlantic, currents of air and water in it described	425	Physick's observations on black- vomit	129
Ocean-water rendered fit for washing by alkalis	457	Physick's experiments on quick- silver	288
Ogden, Dr. Jacob, on the fore- throat distemper	97, 101	Pillson, Dr. G. topography and diseases of Greenville (N. C.)	137
Olmedilla's map of South-Ame- rica	462	Pintard's observations on Loui- siana and the Mississippi	489
Opium, morbid effects of, treat- ed by blood-letting	124	Plague, regulations against it tinctured with the supersti- tion of the middle ages	244
Opportunities singularly favour- able to medical observation and improvement in America	182	Plague engendered in vessels while performing quarantine	246
Origin of the mistake concern- ing the alkalinity of septic acid gas	115	Pliny, his noble character of nitre, or natron (soda)	121
Oxyd, nitrous, puffed above its merits	461	Priestley, Rev. Dr. Joseph, re- marks on Webster's history of pestilence	32
Pascal's, Dr. F. oration to che- mical society	452	Priestley's thoughts concerning dreams	125
Peale, Mr. C. W. account of his museum of natural history at Philadelphia	56	Priestley's experiments on the pile of Volta	153
Peale completes the skeleton of the great incognitum	83	Priestley offers a theory of the Galvanic experiment	157
Pearson, Dr. Richard, letter on hydrophobia	77	Priestley's miscellaneous obser- vations on air	264
Pestilence in the United States, in 1801	221	Priestley's reply to Cruikshank's defence of the new system of chemistry	390, 393
Pestilential poison, universality of	251	Pringle, Sir John, commenda- tion of some of his opinions	87
Pfeiffer, Dr. S. on salivation in phthisis	394	Pus of ulcers often grows acid a few hours after secretion	86

INDEX.

xi

	Page.		Page.
Pot-ash, carbonate of, useful in surgery	151	Quarantines, theological and medical history of	244
Pot-ash, carbonate of, administered to restore excitability to the stomach after stramonium had been swallowed	38	Quarantines contrived at the time of the crusades	246
Pot-ash, carbonate of, given to compose the stomach after arsenic taken down	43	Quarantines perpetuate the distempers which they pretend to prevent	254
Pot-ash, carbonate of, prescribed happily in confluent small-pox	88	Quarantines, motion in congress concerning	344
Pot-ash, carbonate of, ordered efficaciously with tartar-emet-ic in malignant fevers	146	Quicksilver, how it operates	288
Pot-ash, carbonate of, good in cholera and tenesmus	149	Quicksilver, experiments on	289
Pot-ash, carbonate of, given in phthisis pulmonalis	221	Rainbows, three seen at once	210
Pot-ash, carbonate of, singularly advantageous in bilious colics	270	Repulsion universally ascribed to anticrouon	337
Pot-ash, carbonate of, found of excellent use in colics, dyspepsia, diarrhœa, dysentery, and fever and ague	414	Review of Barton's account of the poisonous honey of North-America	47
Pot-ash, carbonate of, aids the febrifuge virtue of Peruvian bark	ibid	Review of Mease's observations on Rush's arguments in fa-vour of the inflammatory na-ture of hydrophobia	50
Pot-ash, carbonate of, employ- ed with great benefit in in- testinal diseases	419	Review of Peale's two introduc- tory lectures on natural his- tory	53
Pot-ash, carbonate of, increases the efficacy of camomile in- fusion	420	Review of Skinner's treatise on the teeth	58
Pot-ash, strong ley of, employed to destroy pestilential venom and infection	71	Review of Caldwell's medical and physical memoirs 62, 200,	327
Pot-ash and pearl-ash, adultera- tion of the manufacturers, and inspection thereof at New- York	81	Review of transactions of the American philosophical so- ciety, vol. iv.	67
Pot-ash the grand purifier in na- ture	196	Review of Woodward's confi- derations on the substance of the sun	165
Pot-ash, caustic, an excellent ap- plication to cancers	150	Review of Haygarth's letter on the prevention of infectious fevers, &c.	179
Pot-ash, put upon hams, neu- tralizes their septic acid, and turns to salt-petre	472	Review of Moore's great error of American agriculture	311
Potomac river frequented by canvass-back ducks	342	Review of Hall's history of the Mississippi territory	319
Portsmouth (N. H.) bill of mor- tality for	354	Review of Rush's six introduc- tory lectures	323
Quackenbos, Mr. N. J. on the yellow fever of emigrants from Europe	226	Review of Caldwell's reply to Haygarth	330
		Review of Mitchill's synopsis of chemical nomenclature and arrangement	333
		Review of Barnwell's physical investigations and deductions	423
		Review of Dancer's Jamaica practice of physic	432
		Review of Barton's collections toward a materia medica	436

	Page.		Page.
Review of astronomical observations in the northern parts of America	446	Sibbald, Mr. G. notes on the pine-lands of Georgia	441
Review of Caldwell's comparison of European and American distempers	447	Silk, spontaneous decomposition of	458
Review of Pascalis's oration before the chemical society of Philadelphia	452	Skinner, Mr. R. C. his treatise on teeth	58
Review of Vaughan's edition of Smith's female monitor	ibid	Soap, antipestilential effects of, when supersaturated with potash	71, 457
Review of Mansfield's essays, mathematical and physical	453	Soap, invention of this alkaline compound	196
Review of Longbotham's treatise on dentistry	454	Soldier, American, his ration	90
Rodgers, professor John R. B. his trials with nitric acid in venereal disorders	10	Soda, or nitre, the first discovered alkali, possessing extraordinary powers	195
Rodgers relates a remarkable case of hydrophobia	75	Soda an excellent anti-dysenteric	415
Rush, professor Benjamin, three letters on salivation and tonics in phthisis	5, 8, 9	Solanum, elegant species of	209
Rush on blood-letting after excessive doses of opium	124	Sound, observations on	415
Rush's six introductory lectures	238, 323	Smith, Dr. E. D. relates a case of hydrocele	134
Russel, Mr. Samuel, his account of yellow fever from corrupting herrings	345	Sneezing by snuff relieves hydrocephalus	133
Salt-petre formed in gammons when alkaliized	473	Snow-storm, a very remarkable one	466
Sandy-spring (Maryland), agricultural society near	311	Stevens, Dr. Edward, botanical researches in St. Domingo	340
Salivation, wholesome effects of, in consumption	5, 394	Spalding, Dr. L. register of deaths at Portsmouth	354
Scrophulous glands contain an acid	95	Spence, Dr. John, employs digitalis successfully in consumption	16
Seaman, Dr. V. his account of vaccination in New-York	236	Spence's practical remarks on digitalis	17
Seybert, Dr. Adam, experiments on the saliva of a patient who had taken quick-silver	289	Spence's observations on inoculating for the kine-pock	381, 388
Shaw, Rev. Dr. Thomas, his description of a Mahometan house, &c.	250	South-Carolina, medical society of	353
Shells, marine, stratum of, in the Chickasaw country	322	Swallows, winter retreat of	327
Shippen, Dr. W. biographical sketch of	355	Stomach secretes from its inner surface the matter of black-vomit	131
Ships, the manufactories and vehicles of pestilence	70, 235	Stomach the introducer and propagator of febrile action	310
Ships, mode of keeping them clean by alkalies	456	Stomach considered as the seat of morbid derangement	300
		Storms from the N. E. begin in the S. W.	465
		Syphilis treated by nitric acid, with uncertain success	11
		Tænia, or tape-worm, expelled by fern	40
		Teeth, directions for extracting	60
		Thermolamp, description of	474, 479, 480

INDEX.

xi

	Page.		Page.
Thermolamp, opinion on	463	Walker, Mr. R. experiments on the acid of pus	85
Torpor relieved by electrical shocks	45	Washing, concerning this process of cleanliness	194
Tracheotomy proposed as a remedy in hydrophobia	4	Water, decomposition of	92, 219
Typhus engendered in unalkalized and nasty abodes in Great-Britain	184	Water not decomposed by the Galvanic experiment of Volta	157
Typhus, analogy between it and American yellow fever	203	Water-bath, what	194
United States of America, population of, in 1801	216	Water-proof cloth and paper, discovery of	478
Vaccination, address to the poor on	255	Waterhouse, professor Benjamin, on the time for taking vaccine virus	348
Vaccine disease, concerning its origin	477	Waterhouse ascribes much to electrical agency	372
Vaccine inoculation, instructions for	483	Waterhouse on the inoculation of kine-pock	373, 387
Vaccine institution of New-York,	347	Waterhouse on storms and tempests	468
Vaccine pock discovered on American cows	93	Webber, professor, his meteorological observations	468
Vaccine virus, the point of time for taking it	347, 348	Webster, Mr. Noah, on earthquakes, tempests and epidemics in connection	25
Vapours, noxious acid, proceeding from the earth	33	Webster on equivocal generation	28
Vapours of putrefying raw hides excite yellow fever	149	Webster's history of epidemics, remarks on	32
Vapours of corrupting herrings cause yellow fever	345	Webster considers the sun the great electric of the system	371
Vaughan, Dr. John, gives alkalies successfully in confluent small-pox	88	Wheat, Sicilian, thrives in New-York	81
Vaughan relates remarkable cases of madness	408	Winds in North-America, facts for a theory of	465
Vaughan's edition of Smith's letters to married women	452	Woodhouse, professor James, remarks on basaltes	22
Ventilation, explanation and theory of this process of cleanliness	194	Woodhouse's considerations on the doctrine of phlogiston	67
Vinall's electrical practice	44	Woodhouse on the decomposition of water	91
Virginia, its towns of Petersburg, Richmond and Norfolk, described	429	Woodhouse's botanical and chemical account of shrub yellow root	160
Virus, pestilential, bred on ship-board, between Ireland and the United States	69	Woodhouse's experiments on nitrous oxyd	461
Volta, pile of, experiments relating to	154	Xanthoriza simplicissima, a substitute for columbo	94
Wall, subterranean, on the Yadkin	21, 397	Xanthoriza tinctoria, description and plate of	159
Walls of leprous houses, Mosaic directions concerning	249	Yellow fever bred on board the ship Delaware	282
Walls of modern houses in Syria and Barbary, their materials	248	Yellow dyeing wood	161
		Young, Dr. Joseph, vindication of his system of astronomy	361
